

# DevOps Engineer

(m/f/d) Aachen or remote

## You love to understand customer problems and help to deploy enterprise-wide data infrastructures?

We're a proven startup that provides a data registration platform to uniquely identify and link critical enterprise data objects – from products, customers, medications, diseases to devices, genes and countries. This helps our big life-sciences customers to collaborate more effectively and shorten the time to bring new drugs on the market – for example, COVID vaccines.

### Your Mission

- work with the product team on creating great deployment experiences
- help customers to choose the right setup for ACCURIDS in their environment
- support customers to deploy ACCURIDS or setup of a SaaS subscription
- reviewing of customer inquiries related to the product and installations

### Your Skills

- development and operations are things you like to combine effectively
- experience in deployment technologies such as Kubernetes
- 3 years of experience in enterprise software development and operations
- high orientation to quality, reliability and performance in implementations
- great communication skills with a positive, proactive attitude to problem-solving

### Your Benefits of Working with Us

Join an inspiring work environment with a small but great team and leading life-science customers. You'll get

- experienced colleagues that give you freedom, responsibility and feedback
- a competitive salary
- flexible working schedule and workplace with full remote option
- team events and adventure trips
- an adjustable stand up desk
